Lab 2: Boilerplate Project

Goal: Set up a clean Playwright **JavaScript** boilerplate you can reuse for future labs.

---

1) Create a “Boilerplate” folder in VS Code

---

2) Add baseline project files

Copy these files into the folder (use the ones we already created):

- `.gitignore`
- `.eslint.config.mjs`
- `package.json`
- `playwright.config.js`

---

3) Create test and page directories

Inside your project folder, create:

/tests
/pages

---

4) Create a README

Add a `README.md` file with exactly this content:

Playwright Boilerplate Project - JS

Intallation

`npm i`

Quick sanity check

npm i
npx playwright test –ui
