Lab 4: Build Locators

Goal: write Playwright locators for **six different element types** on *your* page.

Getting Started

1. Create a new spec file in your Section4 folder
2. Name the file lab4.spec.js
3. Enter all necessary code
4. Set your page.goto() to navigate to the isolation-test page on the test site.

Locators to Create

Generate a locator using each of the locator methods below:

1. `getByRole`
2. `getByLabel`
3. `getByPlaceholder`
4. `getByText`
5. `getByAltText`
6. `getByTitle`
7. `getByTestId`

Run Tests

Run your tests and make sure the locators are all finding the correct elements.
